# 1. About JARVIS

JARVIS is an AI-powered personal assistant designed to interact with users through voice and text while helping them control their computers.

## Main Features

- Real-time AI voice conversations.
- Open applications and manage files.
- Control system settings, volume and brightness.
- Search the internet and browse websites.
- Send messages and set reminders.
- Screen and webcam understanding.
- Long-term memory.
- AI coding assistance.
- Remote control through a phone dashboard.
- Face and voice security.
- Individual drive permissions.

# 2. System Requirements

| Component | Requirement |
|---|---|
| Operating System | Windows 10/11, macOS or Linux |
| Python | 3.11–3.13 |
| RAM | 8 GB recommended |
| Microphone | Required for voice |
| Speakers | Required for voice output |
| Internet | Required for Gemini Live |
| Webcam | Optional |
| Storage | Approximately 1–2 GB |

# 3. Installation

Follow these steps to install JARVIS:

1. Extract the project ZIP file.
2. Open the project folder.
3. Open Terminal or PowerShell inside that folder.
4. Run:

```
python setup.py
```

5. Wait for the installation to finish.
6. Start JARVIS using:

```
python main.py
```

# 4. Initial Setup

When launching JARVIS for the first time:

1. Enter your Gemini API key.
2. Select your operating system.
3. Confirm the configuration.
4. Allow JARVIS to connect to the selected AI provider.

You can obtain a Gemini API key from Google AI Studio.

# 5. Using JARVIS

JARVIS supports three interaction methods:

- **Voice:** Talk naturally with the assistant.
- **Push-to-Talk:** Hold `Ctrl + Space` to activate the microphone.
- **Text:** Type commands into the text input.

### Available Commands

| Category | Example |
|---|---|
| Applications | Open WhatsApp |
| Drives | Open C Drive |
| Files | Create a folder |
| System | Increase volume |
| Internet | Search for AI news |

| | |
|---|---|
| Browser | Open YouTube |
| Communication | Send a WhatsApp message |
| Reminders | Remind me to study |
| Coding | Help me write Python code |
| Monitoring | Check my CPU usage |
| Security | Show security status |
| Memory | Remember my project |

# 6. AI Engines and Providers

JARVIS supports different AI configurations.

**Gemini Live**

- Ready-to-use voice AI.
- Requires a Gemini API key.
- Handles voice, conversation and tool interactions.

**My Own Setup**
Allows users to configure their own:

- Speech-to-Text (STT).
- Large Language Model (LLM).
- Text-to-Speech (TTS).

Supported integrations include Ollama, LM Studio, OpenAI-compatible APIs and Piper.

# 7. Security and Privacy

JARVIS includes an optional Security & Privacy system designed to protect the computer and user information.

## Security Features

- Face recognition and tracking.
- Voice verification.
- Open Voice and Strict privacy modes.
- Backup PIN protection.
- Emergency Lock.
- Automatic locking.
- Encrypted biometric storage.

- Camera activity indicator.
- Drive permission management.

### Drive Permission Management

Users can individually control access to each computer drive.

Available permissions:

| Permission | Function |
|---|---|
| ACCESS | Master access permission |
| READ | Open and read files |
| WRITE | Save files |
| CREATE | Create files and folders |
| EDIT | Modify existing files |
| DELETE | Remove files |

**Important:** Unapproved drives are denied access when Drive Protection is enabled. JARVIS cannot grant itself additional permissions.

### Camera Privacy

The camera only operates when the user explicitly enables camera permission. An activity indicator displays when the camera is active.

### Privacy Modes

- **Open Voice:** Allows normal voice interaction.
- **Strict:** Requires verified face and voice for protected operations.

## 8. Safety and Control

JARVIS includes several safeguards:

- Important system actions require user confirmation.
- File operations support Undo.
- Failed or unverified actions are reported honestly.
- External website and document instructions are treated as untrusted content.
- Security permissions cannot be granted by the AI itself.

## 9. Phone Dashboard

JARVIS provides a remote dashboard that can be accessed through a paired smartphone.

Available functions include:

- View assistant status.
- Send text commands.
- Control sleep and wake.
- Upload files.
- Access security information.
- Manage supported security settings.

Both devices should be connected to the appropriate local network.

# 10. Memory and Data

JARVIS can remember useful information between sessions.

Important files:

| File/Folder | Purpose |
|---|---|
| `config/` | Application configuration |
| `memory/` | Long-term memory |
| `plugins/` | Additional skills |
| `providers/` | AI provider configurations |
| `security/` | Security system |
| `dashboard/` | Phone dashboard |

Keep API keys and personal information private.

# 11. Troubleshooting

| Problem | Suggested Solution |
|---|---|
| JARVIS does not start | Check Python and dependencies |
| Invalid API key | Enter a valid Gemini API key |
| Microphone not working | Check audio settings |
| Drive access denied | Review drive permissions |
| Face recognition fails | Check camera and internet connection |

| | |
|---|---|
| Strict mode unavailable | Register face and voice first |
| Phone dashboard unavailable | Check network and firewall settings |
| Local voice not working | Check the selected TTS provider |

---

# 12. Creator and Credits

## Created and Developed By

**SAMIN EASAR**

**Project:** JARVIS – AI Personal Assistant

**Project Focus:**

- Artificial Intelligence
- Computer Automation
- Voice Assistance
- Cybersecurity and Privacy
- Intelligent Desktop Interaction

**Security & Privacy Upgrade:** Additional security, privacy, biometric protection and drive permission features.
